

6.2.3 Registration

All AIS customers (agents/importers/exporters) are registered or will automatically be registered once they quote one of the AIS acceptable registration numbers on a customs declaration. All traders must also have an EORI number if importing goods regularly and this is the only number that will be accepted on a customs declaration. Customers who have been issued with a five-digit CAE number (Trader Account Number) prior to 01 June 1997 will continue to use this for method of payment purposes. New customers will receive an eight-digit CAE number. The CAE and the EORI number allocated as a result of the registration are required for Deferred Payment approval. Registration for other import and export functions will be carried out by the eCustoms Account Unit in conjunction with the granting of these approvals.

6.2.4 Payments

Payment for any tax and duties arising on a customs declaration must be collected or secured before the goods are released. Payments of the following charges can be made by cash or by using Revenue's deferred payment facility:

- Customs Duty
- Excise Duty
- VAT at import.

Cash payments can be made into a TAN account/Customs account by using Revenue's online payment facility, in ROS or myAccount. Payments can be made by credit card, debit card or single debit instruction.

The Customs Deferred Payment Facility (Bank Direct Debit) is a facility whereby traders and/or their agents are authorised to defer payment of customs duties. Authorisation will require provision of a bank guarantee/cash deposit and compliance with the conditions of the authorisation. Once approved, payment of taxes and duties arising may be deferred for payment by direct debit to the 15th day of the following month.

Further details on methods of payment may be found at [Payment methods](#).

As well as the Deferred Payment Scheme, AIS will also encompass what is known as Cash payments. Any number of top ups may be made daily to the account. After a transaction is made to an account the credit remaining rolls over from day to day and month to month.
