

Section 6. Declaration for Imported Goods

6.1 General

Except in cases of fallback all import declarations must be lodged electronically via AIS (Article 6 (1) UCC).

If you are importing from a third country, then a customs declaration is required. This is usually completed by a customs agent on behalf of the importer. However, an individual can also complete the declaration using the declaration portal in Revenue's import system, AIS. To complete a customs import declaration an individual must:

- Be registered for Revenue Online Service ([ROS](#)).
- Be registered for Customs & Excise ([C&E](#)).
- Have an [EORI number](#).

If not already registered for ROS, for example if you are a PAYE employee, then a registration request can be submitted through [MyEnquiries](#). Please include your PPS number and brief note on the reason for the request. This can be submitted through the following path:

- 1) Sign into MyEnquiries
- 2) Select 'Add new Enquiry'
- 3) In the 'My Enquiry relates to' section, enter 'Customs':
- 4) In the 'More Specifically' section, enter 'eCustoms - Systems Query' for enquiries relating to General Import & Export Query, EORI, EMS, NCTS, ICS and CD.

If it is not possible to register for MyEnquiries then the request can be sent by e-mail to ecustoms@revenue.ie

On receipt, eCustoms will register the applicant for C&E and complete an EORI registration which will enable the import goods from a third country.

Once registration is confirmed by eCustoms, the next step is to register for ROS on www.revenue.ie. Registration for ROS will provide access to the AIS trader portal and allow submission of an import declaration.

When submitting an import declaration select the type of import declaration required (e.g. H1) and complete the below steps:

Step 1: Log into ROS ([guidance here](#))

Step 2: Select the 'Customs UCC Portal' under the My Services tab – Other Services

Step 3: Follow the guidance on inputting a H1 customs declaration in the Customs UCC Portal [here](#).

On all import declaration you will need to provide a Combined Nomenclature (CN) code for the goods being imported. These codes are set out in [TARIC](#). The CN code is
