

2.5 Where the export declaration must be submitted and where the security-related risk analysis takes place.

The export declaration must be submitted to the customs office of export via AES. AES carries out the security-related risk analysis. The detailed functions to be undertaken at the customs office of export are described at [paragraph 3.4](#) of this manual.

2.6 Responsible person

Responsibility for lodging the export declaration rests with the exporter.

2.7 Time limits

The time limits for lodging an export declaration in various situations are as set out in the Table at [paragraph 4.4](#).

(Article 244 of the DA refers)

In order to allow sufficient time for Customs, through the AES system, to conduct risk analysis on the declaration, the declaration should be lodged as early as possible.

2.8 Routings

Once the declaration has been accepted by the AES system and risk analysis carried out, goods will receive one of three possible “routings” and this will determine the examination, if any, to be undertaken. The position for each routing is as follows:

(a) “Green” routing – no examination of goods or documentation supporting the declaration is required.

(b) “Orange” routing – all documentation supporting the declaration must be produced and checked.

(c) “Red” routing – the goods are to be examined physically together with all documentation supporting the declaration.

[Paragraph 5.3.2](#) contains greater detail in this regard.

2.9 Economic Operators Registration and Identification System (EORI)

EORI is a system which allocates a unique reference number to every trader who interacts with customs authorities in any Member State of the EU. This reference number will be valid throughout the EU and will serve as a common reference for the trader’s interaction with the customs authorities of any Member State. It may also be used for the exchange of information between the customs authorities of the EU, and where appropriate, between customs and other authorities, for example statistical authorities.
