

AES changes: Since March 2023, AES has generated the export MRN, and this will be required for new arrival at exit (IE507) and exit notification (IE590) messages. The EAD will remain until all Member States implement UCC compliant systems. Data Elements will replace SAD boxes in AES. More information on AES can be found [here](#).

3.3 Types of export and the procedures applicable to each

3.3.1 Direct Exports

The customs requirements to be fulfilled in respect of exports from Ireland to a destination outside the Union depend on whether the movement is direct or indirect. In the case of a direct export, a single office in Ireland (e.g., Dublin Airport) acts as both office of export and office of exit. This means that the export declaration is made to that office via AES, all customs formalities and / or controls are completed there, and the goods depart directly (i.e., not via another Member State) to their destination outside the customs territory of the Union. In the case of a direct export, the customs declaration will show an Irish office as the customs office of exit e.g., "IE...".

3.3.2 Indirect Exports

In the case of an **indirect export**, a trader or their representative submits their export declaration to a customs office of export in Ireland via AES (for example, Dublin Airport). AES generates an MRN which is used to identify the consignment at the office of exit. Where the export customs declaration in shows the customs office of exit to be in another Member State, the customs office of export will send a message to the declarant accepting the declaration and confirm release for export.

On arrival of the goods at the office of exit, the trader at exit will need to submit the arrival at exit message. This will allow customs in the office of exit to supervise the physical exit of the goods from the customs territory of the Union and to also inform the customs office of export that exit has taken place once the carrier at exit has submitted the exit notification message.

AES changes: Since March 2023, AES has generated the export MRN, and this will be required for new arrival at exit (IE507) and exit notification (IE590) messages. Indirect Exports commenced in AES from 21 March 2023, will receive responses through AES. The EAD will remain until all Member States implement UCC compliant systems. Data Elements will replace SAD boxes in AES. More information on AES can be found [here](#).
