

Without prejudice to the possible application of penal provisions, the lodgement of a declaration signed by the declarant or their representative (in AES this is a digital signature) renders them responsible under customs legislation for all the following:

- (a) The accuracy of the information given in the declaration
- (b) The authenticity of the documents presented
- (c) Compliance with all the obligations relating to the entry of the goods in question under the procedure concerned.

(Article 15 of the UCC refers)

4.9 Amendment of declarations

4.9.1 General Position

The Customs export declaration is a legal document, and the declarant must ensure that the details declared are accurate. This means that all details on the export declaration must be correct before the goods are exported.

In allowing the amendment of errors or discrepancies, customs officers should consider the risks to Revenue that are involved.

From 1 June 2023 it will not be possible to amend a declaration already submitted via AEP, please contact Revenue Customs for assistance. More information on AES can be found [here](#).

4.9.2 Options available

AES provides declarants with two options to ensure the correctness of declarations prior to goods being exported from the EU:

(a) Pre-lodged declaration (Type D)

When submitting a declaration but unsure about some of the details relating to the consignment, it is possible to submit a pre-lodged declaration (D type). The D type declaration can be lodged up to 30 days in advance of presenting the goods to Customs. This declaration can be amended by lodging an amendment request message (IE513). However, only some data fields can be amended. Once satisfied that the details on the declaration are correct then a second message (C2) is required. It is only at this stage that the declaration becomes a valid export declaration, and the goods are released for export. The C2 message must be lodged within 30 days of lodging the pre-lodged (D type) declaration.

(b) Standard declaration (Type A)

Where, at the time of submission of the declaration all the declaration details are available, then a standard export declaration (A Type) can be lodged. This declaration cannot be amended using the IE513 `amendment request` message once it has been released for export in AES. Where the trader at exit becomes aware of discrepancies between the details that were declared and what is actually being exported, this must
